MVP FAQs

Kyra Balenzano, Lisanne de Groot

What does MVP even stand for?

- MVP = Minimum Viable Project
- Characteristics: entirely **functional** project, save for a few minor bugs
  - Minor bug = something a user would not experience if interacting with the project with basic/ideal behavior
  - User interface should exist but does NOT need to be beautiful

What does MVP get me?

- Achieving MVP ensures you an 75 on your Term Project!

What if I want to go beyond MVP? (i.e. get >75)

A non-exhaustive list of ideas:

- Add more features
- Implement current features from scratch instead of from online code/module calls
- Further improve UI

My mentor told me everything I need to achieve MVP, but it seems arbitrary to me. How is MVP determined?

Each feature that makes up MVP is determined using the following criteria:

If that feature was not included in the project, would said project still be a complete experience?

The End!

Still have questions?

Do not hesitate to contact your mentor; they are here to help! :)
